Art Unit: 2815

### Election

- 1. Claims 1-8 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected group I, there being no allowable generic or linking claim. Election was made without traverse in the reply filed on 06/14/04.
- 2. It is suggested that Applicant cancels claims 1-8 in response to this Office action.

# Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 9 and 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Huang et al. (US 6,528,722 B2).

Art Unit: 2815

Huang teaches a Ball Grid Array (BGA) semiconductor package (see Fig. 7 eg.,), comprising a core layer (52) having a first surface and an opposite second surface, and a through hole penetrating through the core layer, wherein the second surface is formed with a plurality of wire bonding portions around the through hole, a plurality of ballbonding portions; and a plurality of intended-exposing regions around the wire bonding portions; at least on chip (53) mounted on the first surface of the core layer 52 and over the through hole, with a portion of the chip exposed via the through hole; a solder mask layer (51) (see column 4, lines 66-67) applied over the second surface of the core layer (52) with the ball-bonding portions being exposed, wherein the solder mask layer (51) is formed with an opening for exposing the through hole, the wire-bonding portions (54), and the intended-exposing regions; a plurality of bonding wires (54) which penetrate through the through hole and electrically connect the chip (53) to the bonding-wire portions; a first encapsulation body formed on the first surface of the core layer (52) for encapsulating the chip (53); a second encapsulation body formed on the second surface of the core layer for encapsulating the bonding wire and the intended-exposing regions; and a plurality of solder balls (56) deposited on the ball-bonding portions. Note that there is no structure claimed in these claims which could distinguish them over the prior art shown in Fig. 7.

## Allowable Subject Matter

Application/Control Number: 10/618,011

Art Unit: 2815

4. Claims 10, 11, 13-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The applied reference fails to teach and/or suggest as follows:

- wherein a width of the intended-exposing region is of a range from 0.4 to 0.8
   mm and/or 0.4 mm as claimed in claims 10 and 11.
- wherein the opening of the solder mask layer is larger in width than a mold cavity of a mold used for forming the second encapsulation body as claimed in claim 13.
- wherein a thickness of the second encapsulation body covering the intendedexposing regions is substantially equal to that of the solder mask layer as claimed in claim 14.
- comprising a layer of patterned conductive traces that applied between the second surface of the core layer and the solder mask layer as claimed in claim 15; and another solder mask layer that applied between the first surface of the core layer and the chip as claimed in claim 16.

# 5. Claims 17-20 are allowed.

The following is an examiner's statement of reasons for allowance: as per the above discussion the applied reference fails to teach and/or suggest having a conductive trace layer that applied over the second surface of the core layer, and formed with a plurality of wire-bonding portions around the through hole, a plurality of

Application/Control Number: 10/618,011

Art Unit: 2815

ball-bonding portions, and a plurality of intended exposing regions around the wire bonding portions; and a solder mask layer that applied over the conductive traces layer with the ball bonding portions being exposed, and formed with an opening for exposing the through hole, the wire bonding portions, and the intended-exposing regions.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
